# Better Together – Providing Superior Results

Products formulated with MicroSilver BG™ and Ceramide III have enhanced Antibiofilm and Antiseptic activity while restoring the skin's lipid barrier.

“ Products that contain Ceramide III aim to supplement the skin with what is missing. This may help in restoring the normal barrier function by reducing TEWL and there is some data that suggests that the molecule may help in repairing dry or damaged skin. This in theory could lead to reduced flares of atopic dermatitis, fewer secondary infections, and an overall improved quality of life for the patients and their owners. ”

Michael Rossi, DVM, MNS, DACVD

## MicroSilver BG™ Proven Antibiofilm and Antiseptic Properties

MicroSilver BG™ is a pure silver powder consisting solely of highly porous and micro-sized (**NOT Nano**) particles of medical grade silver (99.99% purity) which provides enhanced safety and pharmacological properties versus silver compounds (e.g., silver salts). MicroSilver has long lasting antibiofilm and antiseptic activity on the skin's surface, that helps maintain a healthy skin flora, thus boosting the skin's natural defenses. The silver particles physically attach to the skin and hair follicles and provide a sustainable depot of pure silver that continuously generates positive silver ions. MicroSilver is a natural product certified according to COSMOS/Ecocert and the Natural Product Association (NPA).

“ Most recently a research project documenting that topical products containing various concentrations of MicroSilver were effective at eradicating biofilm formation in an established in vitro model for *Staphylococcus intermedius* and *Pseudomonas aeruginosa*, including multi-drug resistant isolates. ”<sup>2</sup>

Wayne Rosenkrantz, DVM, DACVD
